

ABSTRACT OF THE DISCLOSURE

An animal wound wrap used for holding a primary wound dressing, an IV tube and/or drain tube in place on an animal's body. The animal wound wrap includes an elongated abdomen wrap portion and an elongated extension wrap portion. The two wrap portions are made of stretchable loop-like loose weave material along their length. The abdomen wrap portion can be stretched along a first axis while the extension wrap portion can be stretched along a second axis at an angle to the first axis. The abdomen wrap portion includes a first end portion with hook fasteners and a second end portion for releasably engaging the hook fasteners. The extension wrap portion includes a first end portion attached to a side of the abdomen wrap portion and at an angle thereto. The extension wrap also includes a "U" shaped second end portion. The "U" shaped second end portion includes a first strap and a second strap. The straps are adapted for receipt around the animal's neck, tail, leg or other parts of the animal's body. The hook fasteners are used for securing the straps thereon.
